PROJECTS

Student Attendance Management System

- This project is about maintaining student attendance based on the daily report. This project reduce paper work and useful to keep data for longer time. Data should be secured. Technologies used in this project are php, python, javascript, css, html, mysql.

A Methodology for Secure Sharing of Personal Health records in cloud

- The SeSPHR scheme provides patient centric control on the PHRs and preserve the confidentiality of PHRs. The patients store the encrypted PHRs on the un-trusted cloud servers and selectively grant access to different types of users on different portions of the PHRs.

Portfolio

- A digital resume built with HTML, CSS, and JavaScript showcasing my skills, qualifications, education, work experience, projects, and achievements in an interactive and user-friendly format.

Digital clock

- The digital clock project displays the current time in hours, minutes, and seconds using HTML for structure, CSS for styling, and JavaScript for real-time updates. It updates every second, providing a clean and user-friendly interface that can be easily enhanced with additional features.
